Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The RCE dated 10-25-07 is acknowledged.

Claims included in the prosecution are 16, 19-20, 35, 42-44 and 49-52.

Upon consideration, the previous rejections are withdrawn and the following is a new rejection.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 16, 19-20, 35, 42-44 and 49-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0 850,646 of record by itself or in combination with Woodle 633, either of these in further combination with Allen (4,920,016) of record or JP 2-86841 of record.

EP discloses liposome formulations containing indolocarbazole (anti-cancer agent) derivatives. The liposomes are made from hydrogenated phospholipids and PEG-DSPE (note abstract, page 4, Examples and claims). Although, EP does not

explicitly state that the sizes of the liposomes, on page 4, the reference teaches various methods of preparation of liposomes, either multilamellar or unilamellar. One of ordinary skill in the art would be motivated to prepare liposomes of instant sizes since the references of Woodle show the routine practice in the art of preparing liposomes of different sizes. One of ordinary skill in the art would be motivated further to use liposomes of larger sizes since Allen teaches that small unilamellar vesicles having diameter of 0.04-0.08 micron range tend to fuse and leakier than REVs and MLVs (which have larger diameters) (col. 9, lines 28-38) or JP teaches that when the sizes of the liposome particles is less than 180 nm, the energetically unstable particles fuse to form large particles.

Applicant's arguments and the declaration have been fully considered, but are not found to be moot in view of this new rejection.

The examiner requests an English translation of JP if one is readily available.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gollamudi S. Kishore, Ph.D whose telephone number is (571) 272-0598. The examiner can normally be reached on 6:30 AM- 4 PM, alternate Friday off.
